

JOB AID- STEAMING MILK

1

Fill pitcher with cold milk to bottom of pour spout indent

2

Purge steam wand to remove water

3

Submerge tip of steam wand just under surface of milk

4

Turn on steam wand and lower the pitcher to aerate the milk for 2-3 seconds

5

Submerge the wand more to create a whirlpool motion. Keep pitcher level.

6

Heat milk to 140-150 degrees. Pitcher should become hot to touch

7

Turn off steam wand. Wipe the steam wand with sanitizer towel and purge steam wand.

8

Groom milk by gently tapping on counter and swirling pitcher to eliminate bubbles and discourage separation of microfoam.

Quality Indicators:

- Silky texture
- Free of bubbles
- Resembles wet paint
